

H-Power Remote 4 + 4

is the bi-directional coupling system for 4 sensor signals and 4 actuator control signals.

This system inductively transmits signals in both directions.

Previously only the sensors could be supplied. The Remote Unit RHPT8 can now also be used with clamping units.

From the stationary side up to four signals can be transmitted, and four channels can be independently controlled.

for connecting max. 4 sensors + 4 actuators

The Remote unit is attached on the moving side where the sensors and actuators are located.

The Base unit is connected on the stationary side to the supply voltage and the controller.
